

Smart Thin Calculation (STC)

Smart Thin Calculation is our new advanced feature designed to make lenses **thinner and lighter**. By combining an optimized lens surface with a double-aspheric design, the result is a lens that delivers **outstanding clarity in every direction of gaze**, while also **reducing thickness** for a more comfortable fit.

You can choose from different intensity levels, allowing the finished lens to be reduced by as little as a tenth of a millimeter or by as much as 20%. The benefit: **sleeker aesthetics and thinner, more comfortable lenses, no matter the prescription.**
