

Thank you for your eyewear purchase!

WE WANT YOU TO ENJOY YOUR NEW GLASSES FOR A LONG TIME. PROTECT YOUR INVESTMENT WITH THESE STEPS!

LENS CLEANING INSTRUCTIONS

- If lenses are dusty or covered in debris, rinse thoroughly with water before wiping to avoid scratching lenses.
- Clean your lenses daily with non-abrasive lens cleaner & dry with a clean & gentle microfiber cloth.
- Avoid exposing the lenses to hairspray, household cleaners, & chemicals as they can break down the lens coatings.
- Cleaning cloths can be machine washed & air dried. NO fabric softener.

Avoid exposing your glasses and sunglasses to excessive heat/cold, such as keeping them in your car. Keep your glasses in a case when they are not in use. Do not lay glasses face down on any surface.

Additional Care Tips

Clear Vision Starts With Proper Care

Anti-glare (or anti-reflective) coatings are ultra-thin layers that reduce glare & improve clarity, but they require proper care. Over time, **micro-scratches, wear, & environmental exposure** can damage the coating and reduce visual clarity.

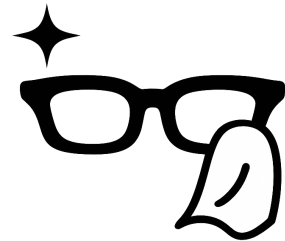

Once the coating is damaged, **it cannot be restored.**

Even high-quality coatings are not indestructible. Just like **smartphone screens**, tiny dust particles & everyday use can cause fine scratches.

The most common causes of coating damage include **extreme temperatures, harsh chemicals, UV exposure, & moisture.**

To help your lenses last longer:

- Use a **clean microfiber cloth**
- **Wash the cloth regularly** & air-dry it
- Avoid **harsh cleaners and fabric softeners**
- Use a drop of **Dawn dish soap and water** for deep cleaning

With proper care, your glasses' coat can stay clear & perform well for **many years!**
