

## Young style progressives with slight power boost

Not all eyeglass lenses are built for every task. For people who spend long hours reading, working at a desk, or using digital devices, they may need a lens designed to fight eye fatigue.

The **Dart Fatigue Shield** is an **advanced anti-fatigue lens** made for adults who wear single vision lenses and experience tired eyes, especially after extended screen time. It features a **subtle power boost** in the lower portion of the lens that eases eye strain, improves focus, and enhances overall comfort.

With OptoTech's cutting-edge **ODP, 4K, and OMD Technologies**, the Dart provides crisp, high-resolution vision with minimal distortion, **smooth transitions between visual zones**, and effortless adaptation for everyday use.

### Design Details & Specs

#### Lifestyle · Anti-fatigue / Baby Add · Office
